

# Year 2000

## Statement of Compliance

**Product Name: Wang Serial Workstations  
Wang Asynchronous Workstations (2110/2110A)**

### **Introduction**

Wang "928 Serial" workstations and Wang 2110/2110A workstations are not date aware and do not store or process dates. Thus, by implication they are inherently Y2K compliant.

This statement of compliance applies to the following workstation models:

4200 series	2110
4400 series	2110A
5000 series	
6000 series	

The statement of compliance relates only to the workstation hardware and standard workstation software provided by Wang. Applications that use workstation features must be evaluated for Y2K compliance on their own merit.

Wang 8000 series graphics workstations and Wang diskless PC's depend upon software which is not Y2K compliant and thus are not compliant.

Wang WLOC hardware option cards are inherently compliant, however the customer must evaluate the PC in which they are installed for compliance.
