

Do you know what is being stored on your VS and how it is being backed up?

Are you comfortable with the way your VS System is currently performing?

VS System Audit Services

It is important that your VS system runs at peak performance to keep up with today's demanding data processing requirements. If you are uncertain about the current status of your VS System configuration, software, data storage, and important security and maintenance procedures, this can now be remedied!

The VS System Audit Service is designed to identify problem areas that might cause your system to be unstable, inefficient, or problematic to administer. It highlights processes that should be improved to have a VS system that runs smoothly day to day, and offers practical insight on how to prepare for unexpected failures that can damage your business.

Who Needs a VS System Audit

The VS System Audit will benefit customers who have:

- Recurring performance issues.
- Sites who have reoccurring problems, unidentifiable errors, loss of data, and data storage problems.
- Staff changes that may have disrupted routine adherence to system administration processes.

Deliverables / Features

Upon completion of the System Audit you will receive a detailed report consisting of a summary and recommendations for the following:

- VS System configuration review
- VS System software version and patch level review
- Disk volume utilization and status review
- Data file maintenance review

Could you recover if you lost your system volume?

A complete VS System Audit is now available!

- System Error Log analysis
- Abandoned application and data file identification
- Backup strategy and process review
- System Security procedures review
- General functional system review

Data Collection Method

A choice of two methods of data collection is available:

- Remote logon by one of our VS Systems analysts
- Automated data collection program installed and run by the customer

VS System Audit Benefits

The VS System Audit recommendations will provide the following benefits when implemented:

- Reduction of unscheduled downtime
- Optimization of the VS System functionality and software
- Streamlined configuration of peripherals
- Cleaned up Disk Storage System
- Proper VS System security procedures
- Assurance that the VS System is at current software versions and patch levels
- Prevention of costly data loss due to improper backup strategies
